

Successful SAP Implementation & Training

Newmont Mining implemented SAP FI-CO to replace multiple legacy systems, which provided Executives in Denver, CO with real-time visibility into the mining operations in South America. Training was also provided for the new system.

Client Overview

With more than 90 years of history in the mining industry, Newmont is one of the world's largest gold producers. Through responsible mining, they believe they can create a stronger business and value for all their stakeholders. Newmont Mining is the only gold producer listed in the S&P 500 index.

Technical / Business Challenge

Merian, Newmont Mining's gold mine in Suriname, South America, had been reporting all financial data through multiple systems. Their deep-rooted process involved duplicate data entry into Excel and QuickBooks and did not provide real-time data to leadership. The biggest challenge was developing a training curriculum and delivering it in the right manner to engage the audience. Some users were working with the old systems and processes for over 20 years, therefore it was essential to have them adopt the new system.

Solution

R121 deployed a team of training experts with complementary skills in the FI-CO sub-modules. The team created training plans and developed materials and curriculum, which was successfully delivered on site in Suriname. Implementing SAP FI-CO enabled Newmont Mining to improve their process and now provides their HQ in Denver, CO with access to real-time data.

Business Results

- Newmont's Merian mine site in Suriname is now fully functional on SAP FI-CO
- Users have embraced the usage of the SAP system to enter financial data
- C-Level executives at Newmont's HQ are able to monitor real-time data and evaluate the success of their Suriname Mining operations
